## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

***Reasons for Allowance***

The following is an examiner's statement of reasons for allowance:

Regarding claim 25, the best prior arts of record, taken alone or in combination, do not very particularly teach: "receiving *only* at the gateway node a notification from the first roaming node that the first device has moved into the coverage area of the first roaming node;" "receiving *only* at the first home node a notification a notification from the gateway node that the first device has moved into the coverage area of the first roaming node;" and, "forwarding the data traffic to the first device wherein *further data traffic* destined for the second device at the second roaming node from the first roaming node is routed to the second home node *without involving the second home node or the gateway node*." Therefore, claim 25 is deemed to be non-obvious over prior arts. Claims 27-30 and 32-34 are dependent on claim 25, directly or indirectly, and are, thus, deemed to be non-obvious over prior arts as well.

Regarding claim 42, the best prior arts of record, taken alone or in combination, do not very particularly teach: "the gateway node being further for sending notification *only* to the first home node;" and, "forwarding the data traffic to the first device wherein *any further data traffic* destined for the second device at the second roaming node from the first roaming node is routed to the second home node *without involving the second home node or the gateway node*." Therefore, claim 42 is deemed to be non-obvious over prior arts. Claims 44-46 are dependent on claim 42, directly or indirectly, and are, thus, deemed to be non-obvious over prior arts as well.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

1. Choyi et al, US 2005/0213545 A1: micro-mobility network routing system and method implementing a protocol that extends the macro mobility support of Mobile IP to support micro mobility which permits a more efficient and easily implemented Internet routing protocol for network devices to be affected via the use of message compositions and protocol extensions that extend the prior art Mobile IP protocols

2. Mizell et al, US 2004/0208187 A1: dynamically redirecting mobile terminal home agent selection in a mobile IP network. A provisioning server assigns a preferred home agent to a group of mobile terminals based on one of a subscriber special services, subscriber connectivity, and home agent capacity

3. Buddhikot et al, US 2004/0087304 A1: a gateway for mobile communications comprises a cache for storing network data recently downloaded from a network, a foreign agent, and a packet filter that directs requests for the network data from a mobile node to the cache wherein the packet filter directs the requested network data from the cache to the mobile node by way of the foreign agent, *without* forwarding the requested network data to a home agent of the mobile node

4. Wang et al, US 7471661 B1: supporting proxy mobile IP registration in a wireless local area network wherein when an AP receives a data packet, the AP may compare the data packet (e.g. source address) with the AP information (e.g. AP subnet) for one or more APs to determine whether to send a registration request on behalf of the node; such as, the registration request may specify the gateway as the node's Home Agent

5. Karoubalis et al, US 7471656 B2: aspects for seamless mobility of mobile terminals in a wireless network include utilizing a re-association request from a mobile terminal to identify need for an internetwork handover of the mobile terminal roaming in a wireless local area network (WLAN), and performing a protocol sequence in an access point for the mobile terminal to handle the internetwork handover to ensure connectivity of the mobile terminal while roaming

6. Wang, US 7457289 B2: inter-proxy communication protocol for mobile IP wherein a first access point then receives an inter-proxy reply message from a second one of the additional access points, the inter-proxy reply message including the IP configuration information, thereby enabling the first access point to send a registration request on behalf of the node using the IP configuration information so that, the Access Points support mobility for a node that does not support Mobile IP

7. Soininen et al, US 7369522 B1: access context management for macro-level mobility management registration in an access network wherein a gateway node monitors whether the registration is successful or fails as a PDP context is deleted, if

the registration irrecoverably fails; while if the registration was unsuccessful but a retry could be successful, the PDP context may not be deleted, but the registration is retried

8. Johnson et al, US 6625135 B1: home agent keeps track of mobile movements
